- Neurocognitive disorders
- Personality disorders
- Eating disorders
- Suicide risk assessment
- Cognitive behavioral therapy
- Supportive psychotherapy
- Motivational interviewing
- Fundamentals of psychopharmacology
- Population-based and collaborative care

Fellowship Testimonials:

“The fellowship provided me with applicable skills when facing encounters with troubled patients during the midst of the pandemic. We formed a network through which our shared experiences during this pandemic helped to keep me focused on important aspects of caring for my patients rather than on the unknowns.”

—Cheryl Thompson, MD, 2020 Cohort

“I do feel more confident and competent to assess mental health, prescribe and know when to refer so I think the course was a success and I am very appreciative for the resources and faculty.”

—Christina Clark, NP, 2020 Cohort

Primary Care Psychiatry Fellowship

About Us

The UCI Train New Trainers Primary Care Psychiatry Fellowship is a comprehensive certificate program designed to address the most frequently encountered mental-health related disorders and treatments. The goal of the TNT PCP Fellowship is to provide mentorship and training in the area of primary care psychiatry. This is not a traditional or ACGME-approved fellowship. This year-long clinical education certificate program is intended for primary-care oriented trainees and providers interested in advanced training in primary care psychiatry. Trainees will learn how to complete an efficient and evidence-informed psychiatric interview in the busy primary care or medical setting. They will also be trained to effectively diagnose and treat commonly encountered psychiatric conditions such as mood, anxiety, psychotic, and substance misuse disorders. Most importantly, trainees will learn how to teach these principles to their primary care colleagues.

Multi-faceted Curriculum:

The following is an outline of the curriculum, developed by the UCI faculty. It includes more than 45 required hours of training, resulting in a certificate of completion from UCI School of Medicine:

- Two weekend in-person teaching sessions (approximately 25 CME hours)
- Live, case-based discussions with a focus on integrated primary care psychiatry twice a month (at least 20 CME hours)
- One hour per month of small group mentoring sessions with a TNT fellowship faculty mentor
- Specialized Child and Adolescence Psychiatry Track
- Complimentary lifelong learning for alumni

This activity series has been approved for *AMA PRA Category 1 Credits™*.

Past Fellows Include:

- MDs
- DOs
- NPs
- PAs

Fellowship Textbook & Handbook:

Reading materials will be provided. Emphasis will be placed on how to provide culturally and linguistically competent and person-centered clinical care. Pre, mid, and post-testing will measure practice patterns and general knowledge in primary care psychiatry.

Tuition: \$15,500
